## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-8 are rejected under 35 U.S.C. 102(b) as anticipated by Kroesbergen (WO 96/23024).

In page 1, lines 1-17, page 2, lines 16-37, page 3, lines 14-22, page 4, lines 12-29 and the Example on page 9, Kroesbergen teaches forming super-absorbent coatings from compositions comprising an aqueous solution of sodium polyacrylate (super-absorbent polymer), polyurethane(binder), and a solution of polyacrylamide (viscosity modifier).

Thus, the requirements for rejection under 35 U.S.C. 102(b) are met

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 1713

4. Claims 1-8 are rejected under 35 U.S.C. 102(b) as anticipated by Barch et al. (USPN 4,466,151) or Gaa et al. (USPN 4,810,576).

In col. 5, lines 61-66 and col. 6, lines 10-59, Barch et al. teach a coating composition comprising an aqueous solution comprising polyacrylate (superabsorbent polymer), polyacrylamide (viscosity modifier), polyurethane(binder), and a lubricant.

In col. 4, lines 50-55, col. 6, lines 5-60, col. 8, lines 12-14, col.10, lines 5-7, and col. 11, lines 1-2, Gaa et al. teach forming coatings from coating composition comprising an aqueous solution of a neutralized polyacrylate (super-absorbent polymer), polymeric agents (viscosity modifier) such as polyacrylamide, lubricants and film-forming polymer (binders).

While Barch et al. or Gaa et al. may not explicitly recite superabsorbent properties as claimed, it is reasonable that the articles produced in Barch et al. or Gaa et al. would possess the presently claimed superabsorbent properties since the composition of Barch et al. or Gaa et al. are essentially the same as the claimed composition and the USPTO does not have at its disposal the tools or facilities deemed necessary to make physical determinations of the sort. In any event, an otherwise old composition is not patentable regardless of any new or unexpected properties. In re Fitzgerald et al , 619 F.2d 67, 205 USPQ 594 (CCPA 1980). See MPEP § 2112 - § 2112.02.

Even if assuming that the prior art references do not meet the requirements of 35 U.S.C. 102, it would still have been obvious to one of ordinary skill in the art, at the time the invention was made, to arrive at the same inventive composition because the

Art Unit: 1713

disclosure of the inventive subject matter appears within the generic disclosure of the prior art.
